IBScovars: results in the layout of thesis Table 4.2

Table 1. Descriptive averages of simultaneous inference results over 10,000 repetitions.

Treatment–control comparison	Mean point estimate	Mean lower / upper 95% interval limits*	Mean interval length
Proposed procedure without shrinkage			
1 vs 0	0.284	(-0.093, 0.662)	0.754
2 vs 0	0.298	(-0.050, 0.646)	0.695
3 vs 0	0.352	(-0.024, 0.727)	0.751
4 vs 0	0.348	(-0.038, 0.734)	0.773
Proposed procedure with shrinkage			
1 vs 0	0.284	(-0.094, 0.662)	0.756
2 vs 0	0.298	(-0.062, 0.659)	0.721
3 vs 0	0.352	(-0.027, 0.730)	0.758
4 vs 0	0.348	(-0.039, 0.735)	0.774

* The limits above are averages of the 10,000 separately computed interval endpoints. They are descriptive summaries, not a single 95% confidence interval.

Each repetition used 40 regression imputations shared by the shrinkage and non-shrinkage procedures. A new 30% expected MAR pattern is imposed in each repetition on the complete dataset.

The table layout follows thesis Table 4.2; only the two procedures requested by the user are shown. No equal-variance or imputation-method comparison is added.

IBScovars: one actual 40-imputation application analysis

Table 2. Simultaneous statistical inferences from the first prespecified repetition.

Treatment–control comparison	Point estimate	95% simultaneous confidence interval	Interval length
Proposed procedure without shrinkage			
1 vs 0	0.245	(-0.123, 0.613)	0.736
2 vs 0	0.269	(-0.093, 0.631)	0.724
3 vs 0	0.306	(-0.082, 0.694)	0.777
4 vs 0	0.271	(-0.129, 0.671)	0.800
Proposed procedure with shrinkage			
1 vs 0	0.245	(-0.123, 0.612)	0.735
2 vs 0	0.269	(-0.109, 0.647)	0.756
3 vs 0	0.306	(-0.083, 0.695)	0.778
4 vs 0	0.271	(-0.128, 0.669)	0.797

This page follows the application meaning of thesis Table 4.2: each displayed interval is an actual simultaneous 95% interval from one 40-imputation analysis. It uses repetition 1, selected by its prespecified seed—not by its results.

Table 2 illustrates the application table; it does not replace the full 10,000-repetition results on page 1. These two types of results must not be interpreted interchangeably.
